

Auth Manager™

Identify, Achieve And Track All Authorizations

Auth Manager™ from DCS manages the authorizations required for getting paid on time and prevents any subsequent denials. To make it easier for patient access staff, it displays an easy to follow work list of all accounts that require authorizations. It can also request authorizations electronically through the payer's website if that payer supports the web technology. It helps speed up the inpatient notification process through a 278 transaction, which prevents denial or lost revenue due to untimely notification.

Auth Manager™ comes with essential reports that can be emailed to the supervisors to notify them about potential accounts that are missing authorizations. The system has built-in rules for determining whether authorization is required based on the patient type, procedure code and payer type. These rules can be maintained by the facility. In addition, it aids the management team in prioritizing the accounts that need immediate attention through its Exception work list.

Why Use Auth Manager™?

- *Identify accounts needing authorizations*
- *Receive authorizations through payer's website*
- *Ability to upload physician orders*
- *Ability to track all authorizations*
- *Ability to notify payer (UHC) of inpatient admission via 278*
- *Increases productivity by eliminating countless hours in identifying accounts needing authorizations*
- *Improves cash flow*
- *Capability to do real-time or batch authorizations*
- *View outstanding accounts via work list*
- *Build rules/edits to alert the admissions staff with missing authorizations*
