eCashiering
Increase Collections at POS

eCashiering from DCS is a payment collection application that helps hospitals collect payments at point of service. Fully integrated with the core AuditLogix suite, eCashiering provides a uniform, consistent way of collecting payments at multiple points throughout the patient access experience. Patient Access staff can seamlessly access the eCashiering module during the registration process, without disruption to their flow of activities. Payments can be collected right after the patient receives bill estimates. The process of moving patients from the bill estimates to payment is seamless. If financial counseling is required, AuditLogix™ Patient Credit Check and Propensity to Pay modules can be fully integrated with eCashiering. eCashiering is integrated with the PatientPortal™ as well, enabling full blown online payments that patients can access in self-service mode. Flexible methods of payment including credit cards and eChecks are included in the eCashiering module. Additionally, payment plans, multi-account payments and a number of other complex payment scenarios are easily enabled by eCashiering. To really take patient experience to the next level, eCashiering also integrates with DCS Global's innovative RegKiosk™ – providing an easy self-service payment option right at time of patient check in.

eCashiering improves collections at point of service and helps reduce bad debt and lost revenue. Completely integrated, eCashiering provides a smooth and seamless experience for your staff, increasing productivity and enhancing patient satisfaction.

Why use eCashiering?

- *Seamless, integrated experience with core quality and accuracy toolset*
- *Smooth flow for both patient access staff and patients to move from bill estimation, credit check to making/accepting payments*

- *Increased staff productivity*
- *Improves cash flow at point of service*
- *Enables quick collection of self-pay account payments*
- *Enhanced patient satisfaction*
