

eForms, eSignature and DocManager

Document Creation, Storage And Routing

DocManager from DCS helps to print documents for all types of patients at the point of registration. It helps the admission staff by giving them the ability to route documents to different locations/departments based on the service type, patient type or any other ADT element automatically with, or without user intervention. All documents have a barcode for ease of scanning. Each of the documents can be stored electronically for easy accessibility which helps to streamline workflows and allows documents to be produced on demand when required.

DocManager also has the ability to auto feed these documents to a hospital's electronic patient folder. DocManager comes with integration adaptors for several HIS and ADT systems based on HL7 or XML specs. In addition, it helps with filling any hospital specific form with demographic or clinical data and has the ability to auto-index and store the document in DCS's imaging repository.

Why Use eForms, eSignature and DocManager?

- Streamlined Workflow
- Supports Paperless operation
- Ability to print wrist bands, face sheets and other documents
- Ability to automatically fill your Charity Care, Medicaid applications
- Low cost of ownership
- Includes document creation, document storage and document routing
- Ability to barcode all documents
- Ability to print all documents at time of registration
- Includes eSignature capabilities using touch screen monitors or signature pads
- Integrated with Kiosks and tablet PCs

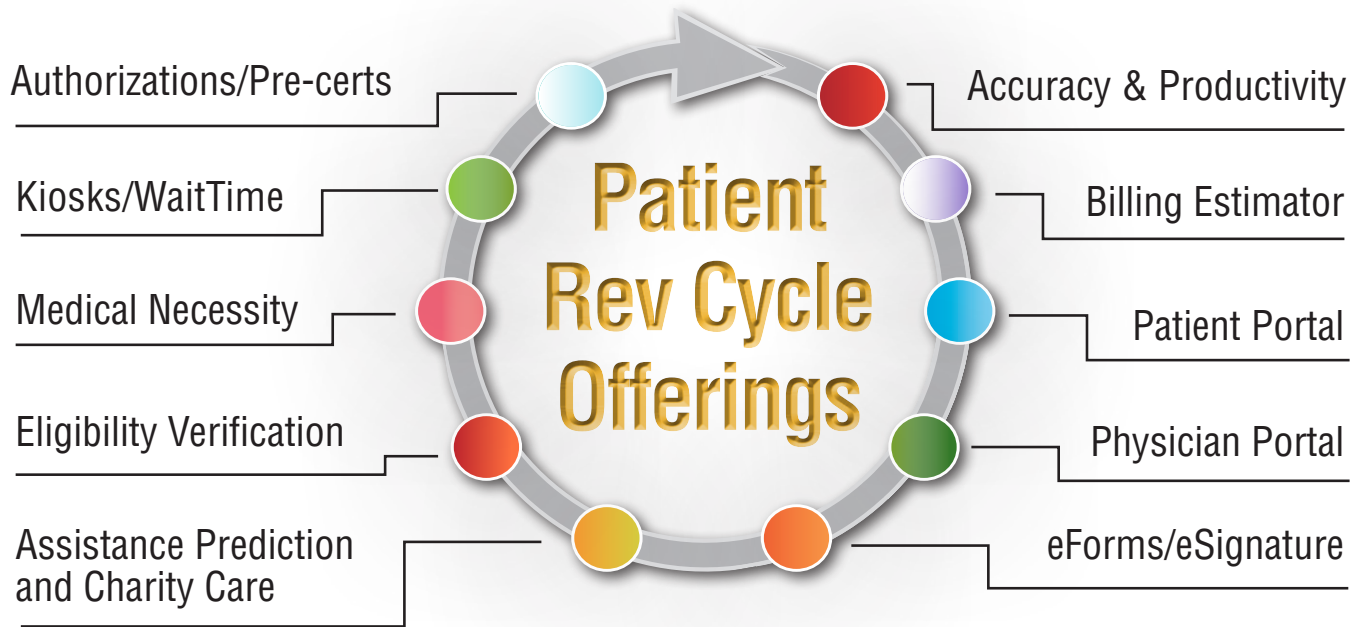

The Patient Access Company
